ABOUT ACDELCO

brake pads

ACDelco Disc Brake Pads are an ideal choice when it comes to quiet, confident braking.

ACDelco Disc Brake Pads provide drivers with confident braking over a wide range of operating temperatures and conditions. The ACDelco Disc Brake Pad range covers a wide range of vehicle applications and offers a longer wearing, low dust formulation with excellent stopping performance.

Features & Benefits

- Every ACDelco Disc Brake Pad has been formulated to the vehicle's requirements to ensure safe and consistent stopping ability.
- ACDelco Disc Brake Pads provide optimum noise suppression and performance using unique formulations and combined with shims, slots and chamfers where needed.
- Each disc brake pad backing plate is protected by a premium powder coated finish, ensuring professional protection and appearance.
- The ACDelco Brake Pad compounds are selected to suit specific vehicle applications and the materials utilised are 100% asbestos free.
- ACDelco Disc Brake Pads friction levels are very stable across a broad range of operating temperatures.
- All ACDelco Brake Pads are designed to provide you optimum performance, durability and to create low levels of dust.

ABOUT ACDELCO

high performance brake pads

For most drivers the range of ACDelco Brake Pads provide the right balance of stopping power, durability and value for money.

Now for those drivers looking for even more stopping power, ACDelco offers the 'High Performance' range of Brake Pads.

Designed to provide additional brake 'bite' with the use of a high friction rating pad material that has been tested and proven to provide exceptional stopping performance. They are ideal for **performance** and **heavy duty applications**, providing braking confidence in extreme conditions including **emergency stopping** and **towing applications**.

Features & Benefits

- High performance friction material
- Consistent braking performance over extreme temperatures
- Designed for performance and heavy duty applications
- Provides braking confidence in extreme situations

Stopping Distances from 100km/h.*

Note: Stopping distances calculated from dynamometer performance test and a constant line pressure of 5MPa. Stopping distances are dependent on many factors such as: Road surface, weather conditions, tyre condition (inflation pressures, wear, type of rubber compound), pedal effort (how hard you are pushing the pedal), front/rear brake balance (ABS & EBD have reduced this effect). Friction material - if the friction is lower or the material fades, the driver will need to press the pedal harder to compensate, if he is not able to do this, stopping distances will increase. For the graph above it is assumed that all the conditions are identical, the only change is to the friction material.

ABOUT ACDELCO

high performance brake pads (continued)

Consistent High Performance at Extreme Temperatures

ACDelco High Performance Pads instill confidence in the driver, whatever the brake temperature. On mountain passes with long descents, repeated braking will cause the brake temperatures to rise to 500 ~ 600°C. At these extreme temperatures ACDelco High Performance Brake Pads maintain their high performance.

Suitable for road use & track days

ACDelco High performance Pads are equally at home for normal road use as they are for track days. They provide excellent stopping power under high-speed braking and also perform well at low speed and low temperature conditions.

BRAKE DISC ROTORS

disk thickness variation

WHAT IS DTV?

Disc thickness variation (DTV) is where the rotor or disc varies in thickness as measured in the diagram.

WHAT DOES IT CAUSE?

As the disc rotates through the caliper the variation in disc thickness results in a variation in braking pressure applied by the disc pads to the rotor. This variation in braking effort is translated to vibration that can be felt through the vehicle. (e.g. pedal pulsing, steering shimmy, floor pan vibration).

HOW DOES IT OCCUR?

Uneven wear of the rotor during service. This means DTV often does not become apparent until 10,000 to 15,000 kms after disc machining or replacement. Poorly serviced calipers can accelerate the occurrence of DTV.

HOW DO YOU MEASURE IT?

Measure the thickness of the rotor 25mm in front of the outer edge using a vernier caliper. This measurement should be taken at a minimum of 10 points around the circumference. There should be no greater than 0.1mm variance in any of the measurements.

HOW DO YOU FIX IT?

Replace the rotor. Overhaul calipers and ensure slide pins move freely and piston seals are in good condition.

TESTING & BEDDING-IN

Road test the vehicle to ensure correct brake function.

Note: With new brake pads fitted proper pad "break in" is critical: Any time you perform a brake job, you should follow the manufacturer's recommended break in procedure.

As a guide (in a safe and controlled environment):

- Accelerate to 50 km/h.
- Apply the brakes using moderate to firm pedal effort, reducing speed to 5 km/h.
- Drive 200-300m accelerating to 50 km/h.
- Repeat 8 to 10 times.

Noting that excessive heating or hard use when new will cause brake pad glazing and will prevent proper break-in.

BRAKE WORKSHOP GUIDE

how to machine, clean & test disc brakes

DISC MACHINING & PREPARATION

1. Machine disc using the slowest feed rate. Do not take heavy cuts. The final cut should be minimal depth to minimise any grooving on the surface.
2. After machining, clean the disc with 240 grit emery on both surfaces (do this while the disc is spinning on the lathe) to obtain a smooth non-directional surface finish.
3. Finally clean the disc surfaces off with a solvent such as acetone or MEK. Do not use an oil based solvent.

CLEANING THE DISCS

1. Disc machining may leave a fine film of graphite on the disc surface. When picked up by semi-metallic pads, the graphite has a lubricating effect and braking may be affected. Always clean down the disc surfaces using a non oil based solvent, after machining. Never use petrol as it contains waxes which can remain on the disc surfaces after the solvents evaporate. The waxes act as a lubricant, reducing braking efficiency.
2. After fitting, once again wipe down the disc. Only use a clean rag and a non oil based solvent.
3. Check that the brakes have been repaired and fitted correctly using the following testing procedure. Remember to tell your customer that unnecessary, hard braking shortens pad life.

BEDDING-IN

Anytime you replace brake pads you should follow the manufacturers recommended bedding in procedure. As a guide (in a safe and controlled environment).

1. Accelerate to 50km/h.
2. Apply the brake pedal using moderate to firm pedal effort, reducing speed to 5km/h.
3. Drive 200 to 300 metres accelerating to 50km/h.
4. Repeat 8 to 10 times.

Note that excessive heating or hard use when new will cause brake pad glazing and affect brake pad performance.

BRAKE PAD

application list

Information in this application listing section has been compiled from data published from Original Equipment Manufacturers and other parties. This data may change from time to time and ACDelco is unable to warrant the accuracy of this data and does not accept responsibility for loss or damage of any kind caused as a result of such data being inaccurate.

BRAKE CONSUMABLES

brake fluid & brake parts cleaner

ACDelco BRAKE FLUID GLOBAL DOT 4 - 500ml 92286932

Brake fluid for hydraulic brake and clutch systems with a boiling point of at least 265°C and a wet boiling point of at least 175°C. Due to the low deep temperature viscosity this brake fluid is especially recommended for brake systems combined with ABS, TCS and ESP/DSC. ACDelco Global DOT 4 contains effective corrosion inhibitors and antioxidants.

Benefits

- Has high thermal stability.
- Features excellent corrosion protection for various metals.
- Leads to an appropriate swelling within the specification limits of natural rubber (NR), styrene-butadiene rubber (SBR) and EPDM rubber.

ACDelco BRAKE FLUID GLOBAL DOT 4 - 20 Litres 92286931

Brake fluid for hydraulic brake and clutch systems with a boiling point of at least 265°C and a wet boiling point of at least 175°C. Due to the low deep temperature viscosity this brake fluid is especially recommended for brake systems combined with ABS, TCS and ESP/DSC. ACDelco Global DOT 4 contains effective corrosion inhibitors and antioxidants.

Benefits

- Has high thermal stability.
- Features excellent corrosion protection for various metals.
- Leads to an appropriate swelling within the specification limits of natural rubber (NR), styrene-butadiene rubber (SBR) and EPDM rubber.

ACDelco BRAKE PARTS CLEANER 88900163

Oil, grease, grime, and brake fluid build up on brake component can cause improper operation.

Benefits:

- Removes soil, grease, grime and dust.
- Cleans disassembled brake parts.
- Also can be used for cleaning some electrical contacts, carburetor linkages, starters, alternators, electric motors.
- Dries without leaving residue.

ABOUT ACDELCO

disc rotors

ACDelco Disc Rotors are engineered to Original Equipment design criteria and manufactured to the demanding TS 16949 quality standard in a QS9001/QS9000 rated facility.

A focus on high quality casting materials, tight machining tolerances and key design features, ensure that ACDelco Disc Rotors deliver consistent levels of performance and reliability.

All ACDelco Disc Rotors are balanced during the machining process to ensure optimum performance on initial fitment, and are engineered to minimise brake shudder, improve thermal efficiency and reduce brake noise.

Features & Benefits

HIGH CARBON, GREY IRON COMPOSITION

- Low noise propensity.
- High thermal conductivity for fade and cracking resistance.
- Excellent high and low temperature mechanical strength.
- Wear resistance.

OPTIMISED ROTOR DESIGN

- Reduced rotor coning under high temperature.
- Improves thermal efficiency.

ADVANCED VENTILATION

- Optimal cooling behaviour without increased mass.
- Resistance to thermal judder.
- Low transient and permanent deformation.

PRECISE MACHINING TOLERANCES

- Minimises brake shudder.
- Extremely low DTV (Disc Thickness Variation).
- Very low levels of LRO (Lateral Runout).

MINIMUM THICKNESS DIMENSION'S

- Minimum Thickness dimension marked on outer edge.

A word about this catalogue. We have tried to make this catalogue as comprehensive and factual as possible. However, since the time of printing some of the information you'll find here may have been updated. Also, some of the equipment shown or described through this catalogue may have been changed. Further, GM Holden Ltd ABN 84 006 893 232, reserves the right to make changes at any time without notice. No Holden Dealer or other person is authorised or permitted to give or make any statement, assertion or undertaking in relation to the quality, performance characteristics, descriptions or fitness for any purpose of any ACDelco product which is at variance with any written statement, assertion or undertaking on any of these subjects given or made by Holden in its published sales literature, and Holden does not accept any liability for any such unauthorised action.

Holden has authorised Dealers in many parts of Australia for the sale of service parts and the provision of service to owners of Holden's products. Every endeavour is made to ensure that such Dealers carry adequate stocks of service parts, but Holden doesn't make any promise other than that contained in the New Vehicle Warranty given by Holden that such parts or service facilities will be available at any specific location or at any particular time.

Express warranties offered for ACDelco products are subject to the conditions set out in all vehicle handbooks. Details also available from Holden on request. Copyright Holden.
