# Digital Signal Processor

The Axxess Interface line, leader in vehicle interfacing, has once again set the industry standard by developing a cost effective option for customers wanting to retain their factory radio and improve vehicle sound quality when adding aftermarket amplifiers and speakers.

For those customers that want to keep their factory radio or for those that cannot replace their factory radio Axxess' NEW AX-DSP is for you. Our before the amp solution is designed to allow the installer to remove the factory amplifier while maintaining all the OE features of the radio. Whether you have a Digital or Analog factory amplifier system the AX-DSP has you covered.

Installers will love the new Axxess DSP because of its small footprint allowing for a quick, simple installation behind the factory radio. Features and settings are easily controlled via Bluetooth from Axxess' free smartphone application, which is available for both iOS and Android. Axxess is also helping cut down on your installation time with a vehicle specific T-Harness (sold separately), the harness makes it even easier to install with no need to cut any wires.

Now there is a smart and cost-efficient way to get that improved sound quality that all customers look for when upgrading their vehicle sound systems.

# AX-HUB Interface

The new AX-HUB works in conjunction with the AXXESS UPDATER APP to allow updates of the firmware for our interfaces to be done through most smart devices. The AX-HUB allows the user the freedom of not being tethered to a desktop to update their interfaces any more. When updating an interface through the AX-HUB the user only needs their SYNC cable they use to charge their smart device to complete the update, all other cables are provided with the AX-HUB. The user will need a cellular data plan or be connected to a Wi-Fi network to complete the update.

The AX-HUB can also be used to change features on the ASWC-1. After connecting the ASWC-1 to the vehicle, just hook up to the AX-HUB to the interface and your smart device. Open the AXXESS UPDATER APP and re-assign the buttons to your own personalized settings, dual assign buttons on certain vehicles, and force a radio type if the radio does not auto-detect. The user will also have the ability to get the vehicle specific installation instructions directly from the app.
