# UNDERSTANDING TOWING

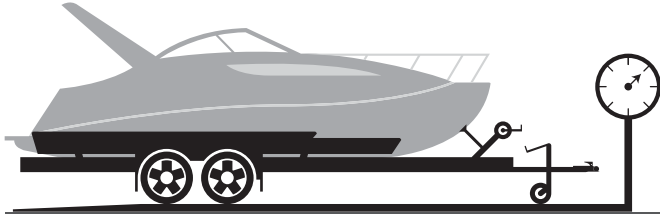

## CONFIDENCE TO BRING IT®

It is CURT's goal, first and foremost, to provide you with a complete line of quality towing products. However, we also strive to give you the resources needed to educate your customers, so they can Bring It® safely and confidently. Understanding Towing offers information on towing components, weight capacities, vehicle-trailer wiring and much more.

# THE BASICS OF TOWING A TRAILER

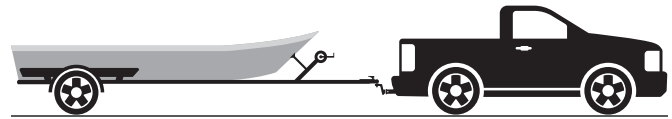

## Gross trailer weight (GTW)

The gross trailer weight is the total weight of a trailer and its cargo. For example, GTW = boat + trailer + cooler + fishing gear. It is vitally important to know the GTW to ensure safe towing. It can be measured by putting the fully loaded trailer on a vehicle scale.

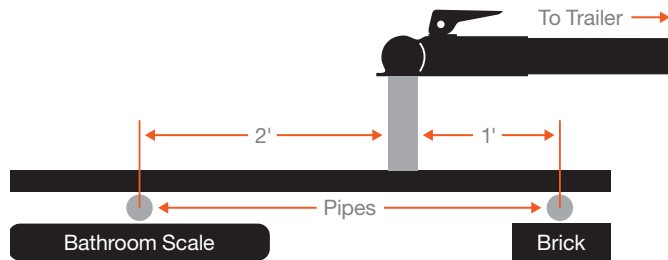

## Weight carrying capacity (WC)

The weight carrying capacity is the total weight a trailer hitch is safely rated to tow without the assistance of a weight distribution system. When towing, always use the lowest weight capacity rating of the towing system.

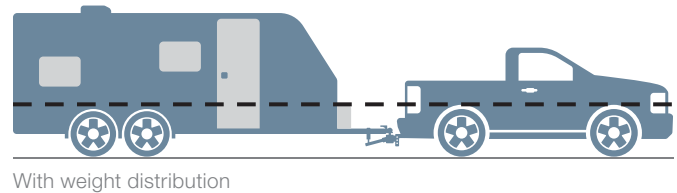

## Tongue weight (TW)

Tongue weight is the downward force of the trailer at the coupling point. Proper TW should be about 10% to 15% of the GTW. To measure TW, use a commercial scale or a bathroom scale. In the method shown below, multiply the scale reading by three.

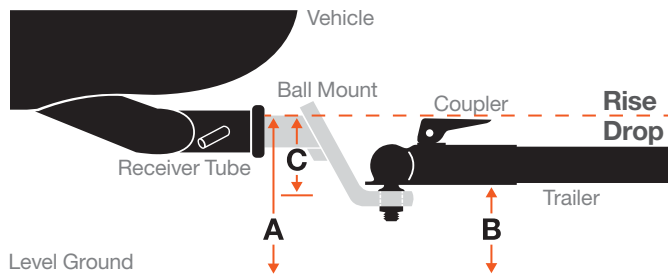

## Weight distribution capacity (WD)

The weight distribution capacity is the maximum amount of weight a trailer hitch can safely tow with a weight distribution hitch installed. A weight distribution hitch distributes a portion of the TW across the vehicle and trailer. See page 210 for WD products.

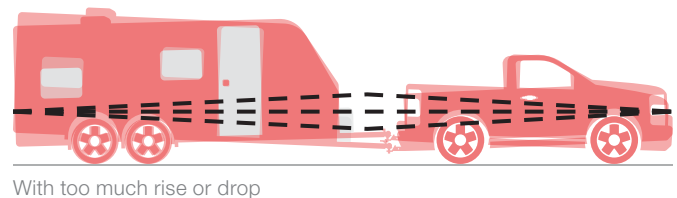

## Measuring ball mount drop & rise

When selecting a ball mount, it is important to determine drop / rise for leveling the trailer. Use the diagram below to find this value. B minus A equals C. If C is negative, this indicates the amount of drop needed. If positive, it indicates rise.

## Level towing

Using a ball mount with the proper amount of drop or rise will allow for level towing across both trailer and vehicle. Without a level vehicle-trailer combination, the trailer can tend to wander and can even impair the driver's control over the vehicle.

# TOWING ELECTRICAL SUBCATEGORY COLOR GUIDE

## Towing Electrical

CURT has identified seven subcategories within the Towing Electrical category to make it easier for retail customers to find the correct products. Each sub category is given a unique color that we apply in our literature and retail packaging for easy visibility.

### Brake controls

Many trailers are equipped with electric trailer brakes, and to properly use them, a brake control is needed. A brake control regulates the trailer brakes from the dash of the vehicle and serves as an interface for the driver. There are two basic types: inertia-based and time-based. For more information, see page 131.

### RV harnesses

When dinghy towing a vehicle behind an RV, syncing the taillights is essential. This requires an electrical connection from the vehicle to the RV. CURT RV harnesses plug into the vehicle, using vehicle-specific plugs, and provide a standard 4-way flat to plug into the RV socket. See page 150 for a complete listing.

### Plugs & sockets

A plug and socket are the basic components that allow a vehicle wiring system to connect to a trailer. Plugs and sockets can use anywhere from two to seven wires. When preparing to tow, the plug is inserted into the socket and supplies power to the trailer lights and other electronics. See page 157 for our plugs & sockets.

### Accessories & testers

When installing CURT electrical products, certain electrical components may be required. For splicing, snap locks, wire nuts, terminals and butt connectors provide a reliable connection. When installing a trailer wiring connector or experiencing electrical problems, be sure to test the connection with an electrical tester.

### Custom wiring

If your customer's vehicle is not equipped with a factory-installed connector, custom wiring is the ideal solution. Custom wiring (or a 'T-connector') plugs into the vehicle's electrical system, using the taillights or an OEM socket, and provides a trailer wiring connector. See the application guide, starting on page 30.

### Electrical converters

If a custom wiring harness is not available for a certain vehicle, an electrical converter may be required. A converter is designed to splice into a vehicle's wiring and convert the signals to be compatible with the trailer wiring, providing a standard 4-way flat socket. Start on page 141 for a listing of CURT converters.

### Electrical adapters

An adapter allows a connection to be made between a mismatched trailer plug and vehicle socket. For example, a vehicle may be equipped with a 7-way, while the trailer may have a 4-way. An adapter can easily be installed to bridge the connection. For our full selection of adapters, see page 152.

# ELECTRICAL WIRING SYSTEMS

Vehicles today use different wiring systems to carry out electrical functions, specifically for taillights, stop or brake lights and turn signals. As vehicles have advanced, these wiring systems have changed. To provide a proper wiring connection for towing a trailer, oftentimes an electrical converter is needed. Below are the common wiring systems used in vehicles today, as well as the types of converters used.

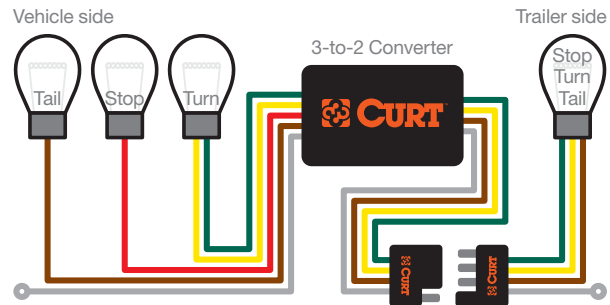

## Two-Wire System

The two-wire system is the simplest form of vehicle and trailer wiring and is still used by some vehicles today. This system sends the stop and turn signals along one wire, and the taillight signal along a second wire.

## Three-Wire System

The three-wire system is the most common in the automotive industry. It sends the stop, taillight and turn signals along three separate wires. Vehicles with a this system usually require a converter.

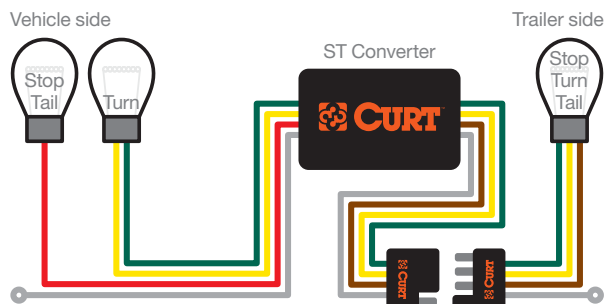

## PWM Systems

More and more vehicles today use a PWM (pulse width modulation) system. Sometimes called a 'multiplex', this type of wiring is able to control multiple lighting functions through a single wire by varying the signal intensity. PWM systems can use incandescent or LED lights. There are generally two types: ST systems and STT systems. See the application guide starting on page 30 for a detailed listing of vehicles with ST and STT systems

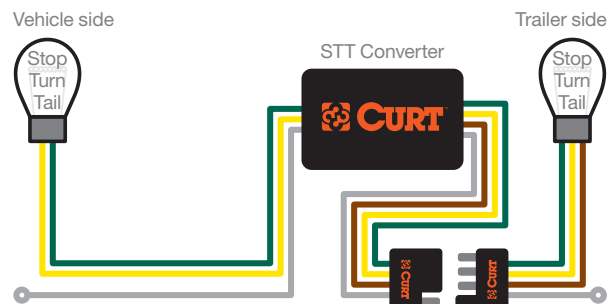

### ST system

The ST system (stop / tail) uses a single wire to control the stop and taillight signals. Separate wires are used to control the left and right turn signals.

### STT system

The STT system (stop / turn / tail) uses a single wire to control all three lighting functions: the stop or brake lights, turn signals and taillights.

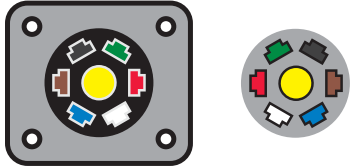

# ELECTRICAL CONNECTOR WIRING GUIDE

There are several formats used for connecting trailer wiring, and each offers slightly different electrical functions. 'Socket' refers to the vehicle-side connection, and 'plug' is used to refer to the trailer side. While most plugs and sockets come with standard color-coded wires, the colors illustrated below may not reflect all vehicles and trailers.

# TOWING ELECTRICAL SUBCATEGORY COLOR GUIDE

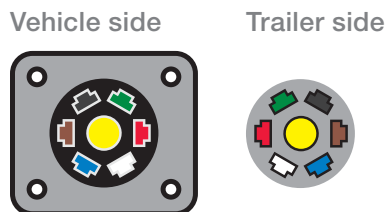

CURT has identified seven subcategories within the Towing Electrical category to make it easier for retail customers to find the correct products. Each subcategory is given a unique color that we apply in our literature and retail packaging for easy visibility.

## ELECTRICAL CONNECTOR WIRING GUIDE

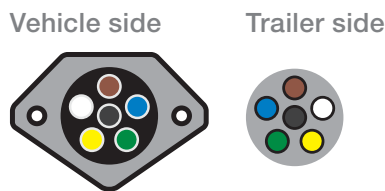

- Rear views of plugs & sockets shown in the representative illustrations below
- Colors illustrated may not correspond with wiring found on the tow vehicle or trailer
- For more information on connector types see page 11

## WIRING SYSTEMS

### Two-wire system

The two-wire system is the simplest form of vehicle and trailer wiring and is still used by some vehicles today. This system sends the stop and turn signals along one wire, and the taillight signal along a second wire.

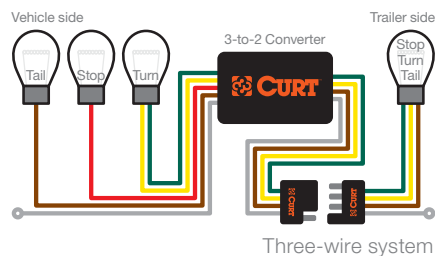

### Three-wire system

The three-wire system is the most common in the automotive industry. It sends the stop, taillight and turn signals along three separate wires. Vehicles with a this system usually require a converter.

### PWM system

More and more vehicles today use a PWM (pulse width modulation) system. Sometimes called a 'multiplex', this type of wiring is able to control multiple lighting functions through a single wire by varying the signal intensity. PWM systems can use incandescent or LED lights. There are generally two types: ST systems and STT systems.

See page 10 for more details

# THE INNOVATION LEADER IN BRAKE CONTROLS

## BRAKE CONTROLS

## HOW TO SELECT A BRAKE CONTROL

There are two basic types of brake controls. Inertia-based brake controls use accelerometers to measure the change in velocity or inertia of the tow vehicle when braking. Time-based brake controls apply a steadily increasing amount of brake power, based on the gain setting and sensitivity adjustment specified by the driver.

Answer the following questions to help determine which brake control is the best fit for your customer.

### What are they towing?

#### Heavy-duty

An inertia-based brake control is ideal for towing heavy or fragile cargo. It will perform much smoother stops, resulting in less stress on the cargo and on the vehicle.

#### Light-duty

If your customer is planning to tow a relatively lightweight trailer, a time-based brake control may be sufficient. CURT's time-based controls are more budget-friendly and perform well with lighter loads.

### How often do they tow?

#### Frequently

If your customer is planning to tow more than twice a year, the precision of an inertia-based brake control will help protect the life of the vehicle and trailer.

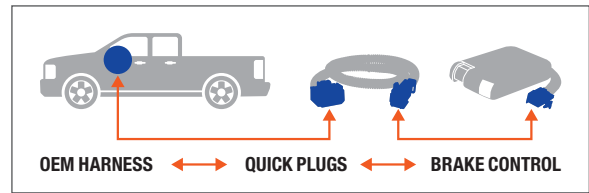

#### Occasionally

If your customer will only tow once or twice a year, they may prefer the simplicity and relatively lower cost of a time-based control. Time-based controls also require very little effort to set up.

On vehicles with two-wire electrical systems that require a powered converter, the converter's red wire is not used as a stoplight connection and needs to be grounded.

**ELECTRICAL  
CONVERTERS**

## TAILLIGHT CONVERTERS

For vehicles that are not compatible with CURT custom wiring options, a taillight converter provides a reliable alternative. CURT taillight converters splice into the vehicle's wiring system and provide a standard 4-way flat trailer connector. **Use the Application Guide on page 30 to find the right wiring solution for your customer.**

**ELECTRICAL  
CONVERTERS**

## 3-TO-2-WIRE CONVERTERS

- Most constructed with surface mount technology for better performance and durability

**CUSTOM WIRING**

# CUSTOM WIRING & T-CONNECTORS

For custom wiring application guide go to page 30

Custom wiring is the easiest way to equip a vehicle with a trailer wiring connection. There are two types: harnesses and connectors. Both are made vehicle-specific and install with no cutting or splicing.

- Provides a standard 4-way flat connector on the vehicle for plugging in trailer wiring
- Simple plug-and-play design eliminates the need for cutting or splicing
- Equipped with a taillight converter if needed
- Dust cover included to keep 4-way flat clean when not in use

## Harnesses

Custom wiring harnesses use multiple plugs to 'T' into the taillight assembly

## Connectors

Custom wiring connectors use a single plug to plug into a specific OEM socket

# SELECTING A GOOSENECK HITCH

There are three basic methods for installing a gooseneck hitch in your customer's pickup truck:

**A** Using an OEM puck system, if equipped

**B** Using a gooseneck hitch and brackets

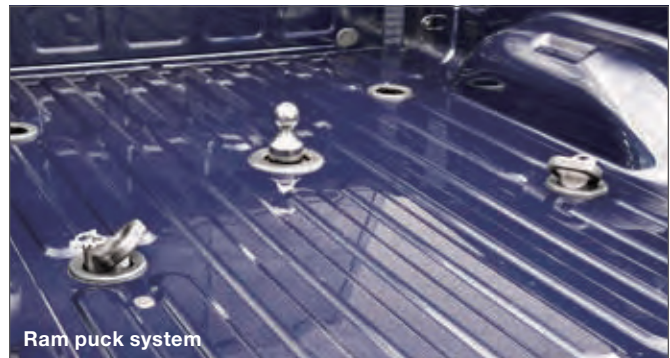

**C** Using pre-existing 5th wheel base rails

## A | OEM PUCK SYSTEM OPTIONS

Many pickups today, specifically models from Ford, GM, Nissan and Ram, are factory-equipped with a truck bed puck system. A puck system provides attachment points for both gooseneck and 5th wheel towing.

For trucks with a puck system, an OEM puck system gooseneck kit is the easiest way to tow a gooseneck trailer. The components can be installed or removed quickly as necessary.

Ram puck system

### Quarter-turn anchoring system

**Step 1** - Lift and twist latch to release the retention balls

**Step 2** - Drop the ball into OEM puck system hole

**Step 3** - Return latch to lock the ball in place for towing

Large safety chain openings accept heavy-duty hooks

## B | CUSTOM APPLICATION OPTIONS

For trucks without a puck system, the traditional method for installing a gooseneck hitch is vehicle-specific brackets.

CURT OEM-style gooseneck hitches are a unique vehicle-specific option, featuring a custom design that quickly and easily bolts to the truck frame without any additional brackets required. These hitches are available for select Ford and Ram trucks.

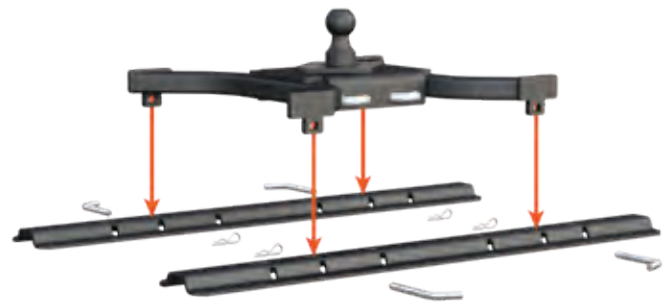

We also offer a variety of other traditional gooseneck hitch options that mount with vehicle-specific brackets. Options include our Double Lock EZr™, original Double Lock, Quick Goose II and more. Many of these hitches are available as a complete kit with the brackets included.

## C | EXISTING 5TH WHEEL BASE RAIL OPTIONS

For trucks with 5th wheel rails already installed, CURT offers 5th wheel rail gooseneck hitches. These 5th-wheel-to-gooseneck adapters feature a four-point mounting system to easily drop into any set of industry-standard 5th wheel base rails.

A 5th wheel rail gooseneck hitch provides a ball ready for towing a gooseneck trailer, and the hitch can easily be removed from the base rails whenever necessary to allow for 5th wheel towing.

# 5TH WHEEL HITCHES

CURT 5th wheel hitches are designed for versatile application and are available in three distinct series. Each one is compatible with a variety of mounting options. See below for an overview of the features and benefits of our different 5th wheel hitches.

## A-SERIES

The A-series is named for its articulating head design. The head is built on a patented cast yoke that offers a stable, quiet ride, even with large 5th wheel trailers. This cast yoke also features torsion springs and poly-torsion inserts to support the head and add even more stability to the connection.

- Lockable, self-resetting handle for fewer steps while coupling
- One-pin head attachment for easy removal and relocation
- High-strength interlocking jaws to add security and reduce noise
- Compatible with Sidewinder™ pin boxes (see page 207)

## Q-SERIES

The Q-series is designed to offer the quietest towing possible. It features a spherical axial bearing that allows the head to tilt in any direction needed to ensure a smooth ride. The head is also equipped with three grease fittings for continuous lubrication and thick rubber stoppers to cushion the head.

- Lockable, short-throw, single-handle operation
- Self-aligning head offers a wide opening for easy coupling
- Dual jaws provide 360° kingpin contact to resist chucking noises
- Not compatible with Sidewinder™ pin boxes

## E-SERIES

The E-series is designed to be a more economical option for our budget-conscious customers. The E-series operates on a dual-pivoting head that provides 10° of lateral movement for smooth towing. The head also features an anti-rattle skid plate with rubber stoppers to help promote a quiet ride.

- Easy, single-handle operation
- Automatic locking mechanism for simple, secure coupling
- Four height adjustment positions to adapt to each unique truck bed
- Compatible with Sidewinder™ pin boxes (see page 207)

# 5TH WHEEL MOUNTING OPTIONS

## OEM Puck System Products

Puck system legs and roller products use a simple quarter-turn anchor system to easily and securely drop into the truck bed pucks built into many pickups today.

- Options available for Ford, GM, Nissan and Ram
- Compatible with most CURT 5th wheel hitches

## 5th Wheel Rollers

CURT 5th wheel rollers are true rolling units, operating on solid rods and wheels to resist binding. They add 12" of clearance when making tight turns.

- Adds turning clearance for short-bed trucks
- Available in 16K, 20K and 24K capacities

## Custom Under-Bed Brackets

Each designed to fit a specific truck application, our custom brackets install in less time and provide a solid mount for our industry-standard base rails.

- Vehicle-specific fit reduces or eliminates drilling
- Protected by a rust-resistant liquid Bonderite® coating

## Industry-Standard Base Rails

CURT industry-standard base rails accept any CURT 5th wheel legs or roller, as well as any competitor 5th wheel with industry-standard mounting points.

- Gloss black or carbide black powder coat finish
- Co-cured in a rust-resistant liquid Bonderite® coating

## X5 Adapter Plates

X5 adapter plates allow a gooseneck hitch to become a 5th wheel mount. They drop into the gooseneck hole and provide a set of industry-standard base rails.

- Available for EZr™, Double Lock and competitor models
- Compatible with CURT 5th wheels up to 20,000 lbs.

## 5th Wheel Accessories

We offer a number of accessories to help improve 5th wheel operation and safety while towing, including 5th wheel wedges, locks, noise dampeners and more.

- Lube plates and sound pads for smooth operation
- Safety chain loops and locks for improved safety

# MOUNTING A 5TH WHEEL HITCH

There are several components that make up a 5th wheel hitch, and these components are determined by truck type and customer preferences. Answer the following questions to help choose the right hitch for your customer.

## What size is the truck bed?

The length of the truck bed will determine which type of mounting platform the 5th wheel hitch requires: legs or a roller. **Note: A roller may be required for long-bed trucks. Review each configuration before purchase.**

### LONG-BED

5th wheel legs are the standard 5th wheel mounting method. A long-bed truck will provide the necessary room for this option.

For long-bed trucks, follow the orange path.

### SHORT-BED

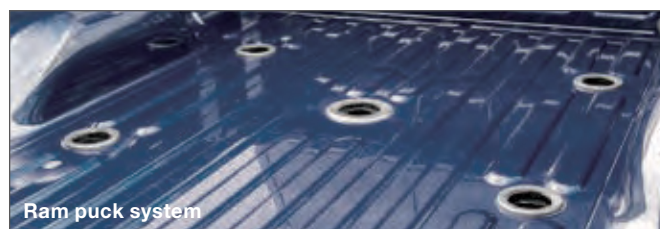

A 5th wheel roller is recommended on short-bed trucks. A roller adds clearance between the cab and the trailer when turning.

For short-bed trucks, follow the blue path.

## A | OEM PUCK SYSTEM OPTIONS

Many trucks today, specifically from Ford, GM, Nissan and Ram, come with a built-in mounting platform in the bed called a puck system. A puck system makes installing a CURT 5th wheel hitch very easy.

If the truck does not have a puck system, continue to page 198 for rail system options.

Ram puck system

### LONG-BED WITH OEM PUCK SYSTEM

If the long bed has a puck system, select a 5th wheel hitch with OEM puck system legs.

See page 195 for our complete kits.

### SHORT-BED WITH OEM PUCK SYSTEM

If the short bed has a puck system, select an OEM puck system roller to mount the 5th wheel hitch.

See page 197 for our complete kits.

## B | PERMANENT RAIL SYSTEMS

If your customer prefers fixed rails in the truck bed, select a vehicle-specific, under-bed bracket kit and corresponding base rails to mount the 5th wheel hitch.

### LONG-BED

1. See page 199 for available bracket applications.
2. See page 198 for corresponding base rails.
3. Select a 5th wheel hitch from the 'Long-Bed Options' starting on page 203.

3. 5th wheel with legs

2. Above-bed base rails

1. Custom under-bed brackets

### SHORT-BED

1. See page 199 for available bracket applications.
2. See page 198 for corresponding base rails.
3. Select a 5th wheel hitch from the 'Short-Bed Options' starting on page 203.

3. 5th wheel with roller

2. Above-bed base rails

1. Custom under-bed brackets

## C | REMOVABLE RAIL SYSTEMS

If your customer prefers the option of easily removing the base rails for an unobstructed truck bed, select a gooseneck hitch kit and an X5 adapter plate to mount the 5th wheel hitch.

### LONG-BED

1. See page 169 for available gooseneck hitches.
2. See page 201 for a corresponding X5 adapter.
3. Select a 5th wheel hitch from the 'Long-Bed Options' starting on page 203.

## 5TH WHEEL ROLLERS ONLY

For short-bed trucks, a 5th wheel roller is used in place of fixed 5th wheel legs to provide the extra clearance needed to make tight turns. A roller allows the hitch to slide backward towards the tailgate several inches, allowing the truck and trailer to turn without obstruction.

See our complete roller and hitch head kits under the 'Short-Bed Options' section in the table starting on page 203.

## 5TH WHEEL WEDGES

A rotating 5th wheel pin box creates an alternative pivot point for the 5th wheel connection, providing the 5th wheel trailer with a wider turn radius. However, because of this secondary pivot point, the primary pivot point must be fixed to keep the trailer from wandering. A 5th wheel wedge bolts onto the pin box, locks up the kingpin and keeps it from swiveling.

- Allows CURT A25, A20, A16 or E16 to be used with Sidewinder™ pin boxes (Trademark of Horizon Global™)
- Helps restrict movement between 5th wheel hitch and pin box
- Permanently attaches behind the kingpin of the pin box
- Protected by a durable carbide powder coat finish

# TRUTRACK™ WEIGHT DISTRIBUTION SYSTEMS

The CURT TruTrack™ weight distribution system is one of the most advanced weight distribution hitches in the industry. It combines precise weight distribution with integrated sway control to deliver the smoothest, safest ride possible. By integrating both features, the TruTrack™ eliminates the need to purchase a separate sway control unit.

## Product Details

- Integrated sway control actively resists sway and levels the vehicle and trailer
- Uses spring & cam system with hardened components, instead of metal friction
- Adjustable brackets provide fixed support unlike spring bar chain models
- Weight capacities available up to 15,000 lbs.
- 2" shank can be flipped to provide necessary drop or rise
- 2-1/2" replacement shanks available (page 218)
- Highly durable carbide powder coat finish
- Informative, full-color retail box

## True integrated sway control

The spring & cam system and fixed support brackets offer true four-point sway control and weight distribution.

## Long-lasting construction

The hardened spring & cam components and cast head are less subject to wear than competitor models.

## Quiet operation

Each TruTrack™ hitch is equipped with grease zerk fittings for continuous lubrication and a quiet ride.

## Easy, versatile setup

The TruTrack™ has two neutral bar settings and adjustable castle nuts to accommodate different trailer sizes.

# CUSTOM SAFETY CHAIN

Safety chains are required by law and should be crossed under the tongue of the trailer so that the tongue will not drop to the road if it becomes separated from the hitch. Always leave enough slack so the vehicle can safely turn. Never allow the safety chains to drag on the ground and never attach the chains to the bumper.

Proper safety chain routing crosses under the coupler

## How to order custom safety chain:

- Step 1 - Determine the gross weight of the trailer  
Example: 7,000 lbs. GTW
- Step 2 - Select chain required  
Example: #82120 zinc-plated (7,800 lbs.)  
Note: By law each individual chain must meet or exceed the GTW
- Step 3 - Determine the required length of chain  
Note: The chains must be long enough to cross one over the other under the coupling point (see illustration to the left)
- Step 4 - Select hook(s) according to capacity and design  
Example: #81900 clevis hook (7,800 lbs.)
- Step 5 - Contact your CURT sales rep for a quote

Federal law requires safety chains to be secured while towing.  
Each individual chain or cable must meet or exceed the trailer weight.
