# THE BASICS OF TOWING A TRAILER

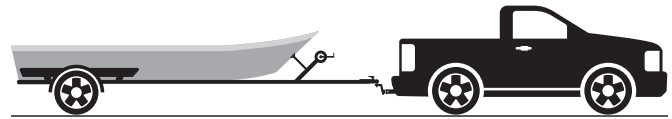

## Gross trailer weight (GTW)

The gross trailer weight is the total weight of a trailer and its cargo. For example, GTW = boat + trailer + cooler + fishing gear. It is vitally important to know the GTW to ensure safe towing. It can be measured by putting the fully loaded trailer on a vehicle scale.

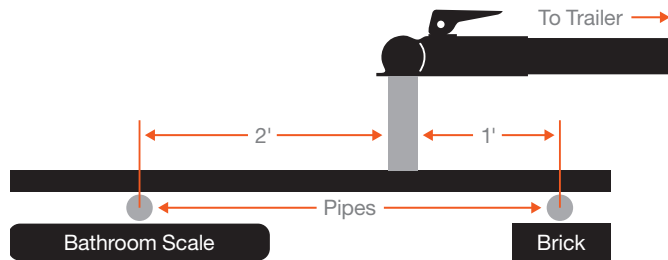

## Weight carrying capacity (WC)

The weight carrying capacity is the total weight a trailer hitch is safely rated to tow without the assistance of a weight distribution system. When towing, always use the lowest weight capacity rating of the towing system.

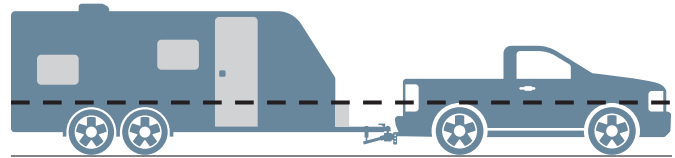

## Tongue weight (TW)

Tongue weight is the downward force of the trailer at the coupling point. Proper TW should be about 10% to 15% of the GTW. To measure TW, use a commercial scale or a bathroom scale. In the method shown below, multiply the scale reading by three.

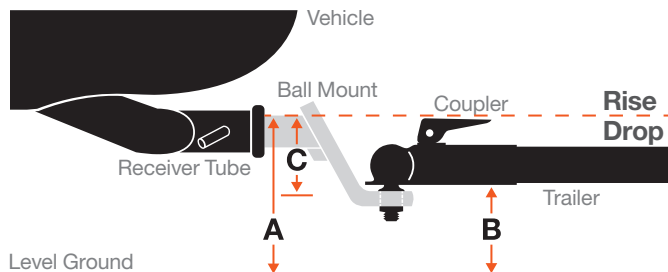

## Weight distribution capacity (WD)

The weight distribution capacity is the maximum amount of weight a trailer hitch can safely tow with a weight distribution hitch installed. A weight distribution hitch distributes a portion of the TW across the vehicle and trailer to promote level towing. See page 224 for WD products.

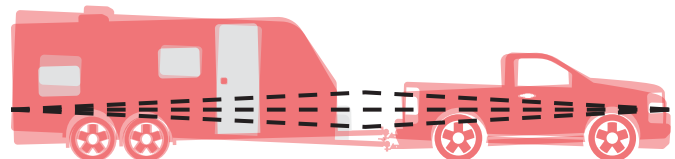

## Measuring ball mount drop and rise

When selecting a ball mount, it is important to determine drop / rise for leveling the trailer. Use the diagram below to find this value. B minus A equals C. If C is negative, this indicates the amount of drop needed. If positive, it indicates rise.

## Level towing

Using a ball mount with the proper amount of drop or rise will allow for level towing across both trailer and vehicle. Without a level vehicle-trailer combination, the trailer can tend to wander and can even impair the driver's control over the vehicle.

With too much rise or drop

# TOWING ELECTRICAL SUBCATEGORY COLOR GUIDE

## Towing Electrical

Page 142

CURT has identified seven subcategories within the Towing Electrical category to make it easier for retail consumers to find the correct products. Each sub category is given a unique color that we apply in our literature and retail packaging for easy visibility.

### Brake controllers

Page 146

Many trailers are equipped with electric trailer brakes, and to properly use them, a brake controller is needed. A brake controller regulates the trailer brakes from the dash of the vehicle and serves as an interface for the driver. There are two basic types: inertia-based and time-based. For more information, see page 145.

### Custom wiring

Page 158

If your customer's vehicle is not equipped with a factory-installed connector, custom wiring is the ideal solution. Custom wiring (or a 'T-connector') plugs into the vehicle's electrical system, using the taillights or an OEM socket, and provides a trailer wiring connector. See the application guide, starting on page 30.

### Electrical adapters

Page 166

An adapter allows a connection to be made between a mismatched trailer plug and vehicle socket. For example, a vehicle may be equipped with a 7-way, while the trailer may have a 4-way. An adapter can easily be installed to bridge the connection. For our full selection of adapters, see page 166.

### Accessories & testers

Page 179

When installing CURT electrical products, certain electrical components may be required. For splicing, snap locks, wire nuts, terminals and butt connectors provide a reliable connection. When installing a trailer wiring connector or experiencing electrical problems, be sure to test the connection with an electrical tester.

### Electrical converters

Page 156

If a custom wiring harness is not available for a certain vehicle, an electrical converter may be required. A converter is designed to splice into a vehicle's wiring and convert the signals to be compatible with the trailer wiring, providing a standard 4-way flat socket. Start on page 156 for a listing of CURT converters.

### RV harnesses

Page 164

When dinghy towing a vehicle behind an RV, syncing the taillights is essential. This requires an electrical connection from the vehicle to the RV. CURT RV harnesses plug into the vehicle, using vehicle-specific plugs, and provide a standard 4-way flat to plug into the RV socket. See page 164 for a complete listing.

### Plugs & sockets

Page 170

Plugs and sockets are typically used as replacement components for connect the vehicle and trailer wiring. They can use anywhere from two to seven wires. When preparing to tow, the plug is inserted into the socket and supplies power to the trailer lights and other electronics. See page 170 for our plugs & sockets.

# ELECTRICAL WIRING SYSTEMS

Vehicles today use different wiring systems to carry out electrical functions, specifically for taillights, stop or brake lights and turn signals. As vehicles have advanced, these wiring systems have changed. To provide a proper wiring connection for towing a trailer, oftentimes an electrical converter is needed. Below are the common wiring systems used in vehicles today, as well as the types of converters used.

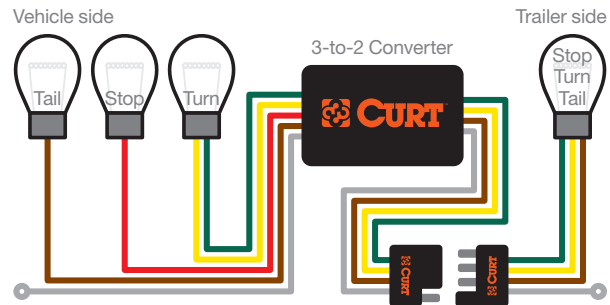

## Two-Wire System

The two-wire system is the simplest form of vehicle and trailer wiring and is still used by some vehicles today. This system sends the stop and turn signals along one wire, and the taillight signal along a second wire.

## Three-Wire System

The three-wire system is the most common in the automotive industry. It sends the stop, taillight and turn signals along three separate wires. Vehicles with this system usually require a converter.

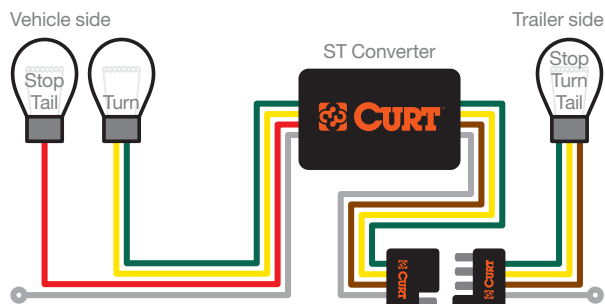

## PWM Systems

More and more vehicles today use a PWM (pulse width modulation) system. Sometimes called a 'multiplex', this type of wiring is able to control multiple lighting functions through a single wire by varying the signal intensity. PWM systems can use incandescent or LED lights. There are generally two types: ST systems and STT systems. See the application guide starting on page 30 for a detailed listing of vehicles with ST and STT systems

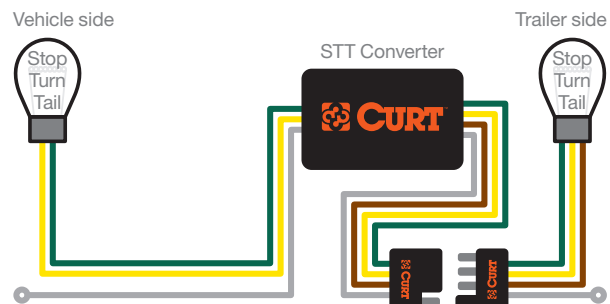

### ST system

The ST system (stop / tail) uses a single wire to control the stop and taillight signals. Separate wires are used to control the left and right turn signals.

### STT system

The STT system (stop / turn / tail) uses a single wire to control all three lighting functions: the stop or brake lights, turn signals and taillights.

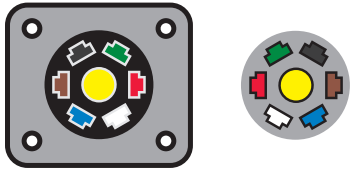

# ELECTRICAL CONNECTOR WIRING GUIDE

There are several formats used for connecting trailer wiring, and each offers slightly different electrical functions. 'Socket' refers to the vehicle-side connection, and 'plug' is used to refer to the trailer side. While most plugs and sockets come with standard color-coded wires, the colors illustrated below may not reflect all vehicles and trailers.

## HOW TO CONFIRM VEHICLE MODEL YEAR

Each VIN (vehicle identification number) is unique and has become standard in all vehicles manufactured since 1981. Of this 17-digit number, the 10th digit represents the model year. Use the table below to find the year that corresponds with each letter or number. **Note:** A VIN will never contain the letters I (i), O (o), Q (q), U (u) or Z (z).

51701 <b>NEW</b>	Mobile towing scale

### What It Calculates

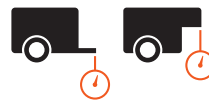

Vehicle weight

Vehicle and trailer weight

Cargo / payload

Tongue and pin weight

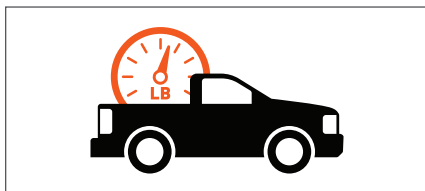

Weight distribution

Trailer brake gain

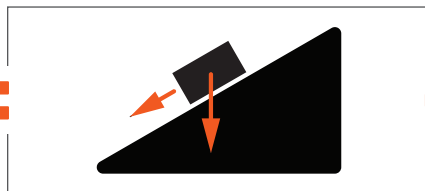

### How It Works

#### Weight

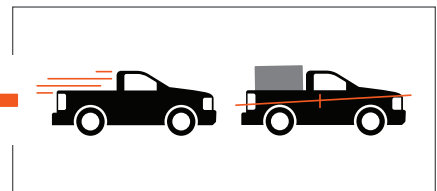

BetterWeigh™ calculates towing weights by gathering data from the OBD-II port and applying Newton's Second Law

#### Force

Force is determined by measuring slip across the torque converter as the vehicle accelerates through 15 mph

#### Acceleration

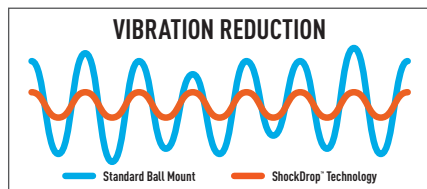

An integrated accelerometer detects how quickly the vehicle takes off and measures changes in the vehicle's pitch

# **SHOCKDROP™ TECHNOLOGY** COMFORT. CONTROL. CONFIDENCE.

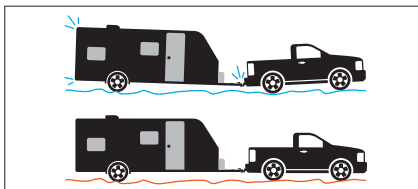

ShockDrop™ technology is an adaptive, dynamic towing system that is engineered to reduce vibrations, rattling and strain on the vehicle. It does this by using an integrated, flexible polyurethane isolator for improved comfort and control. Compared to other cushion hitch options, ShockDrop™ is simple and virtually maintenance-free.

## Enhanced comfort.

Unlike a traditional metal-on-metal towing connection, ShockDrop™ absorbs unevenness in the road to maximize comfort

## Improved control.

ShockDrop™ dynamically reacts to jarring, limiting its effects and giving the driver increased control on the road

## Unmatched confidence.

Unlike a cushion hitch with an airbag or bearings, ShockDrop™ is virtually maintenance-free and is tested for thousands of cycles

## Features & Benefits

- Dampens jerking and jarring from bumps and potholes for smoother towing
- Cushioned isolator reduces rattling and vibration for a more comfortable ride
- Improved trailer control during events of sudden braking
- Minimizes stress on tow vehicle's brakes and suspension for extended longevity
- Virtually maintenance-free with no airbag or bearings to service
- Grease zerk fitting provides easy lubrication

# SL™ SECURELATCH™ SERIES AUTO-LOCKING TECHNOLOGY

SecureLatch™ streamlines the trailer hookup process with a revolutionary auto-locking design. Unlike any other coupling device, the primary latching mechanism automatically locks into place as you back up to the coupler. No manual coupling required! Simply insert the secondary safety pin, and you're ready to tow.

## Strike the plate.

As you back up the vehicle, a built-in back plate helps position the coupler or lunette ring for easier hookup

## Drop the coupler.

As the coupler is lowered onto the pintle hitch, SecureLatch™ automatically locks without any manual coupling required

## Tow with confidence.

Finally, insert the secondary safety pin, connect the safety chains and you're ready to tow with confidence

# TOWING ELECTRICAL SUBCATEGORY COLOR GUIDE

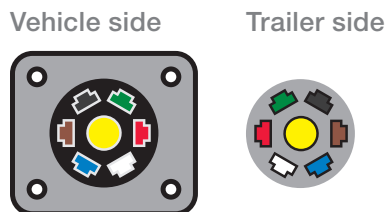

CURT has identified seven subcategories within the Towing Electrical category to make it easier for retail consumers to find the correct products. Each subcategory is given a unique color that we apply in our literature and retail packaging for easy visibility.

## WIRING SYSTEMS

### Two-wire system

The two-wire system is the simplest form of vehicle and trailer wiring and is still used by some vehicles today. This system sends the stop and turn signals along one wire, and the taillight signal along a second wire.

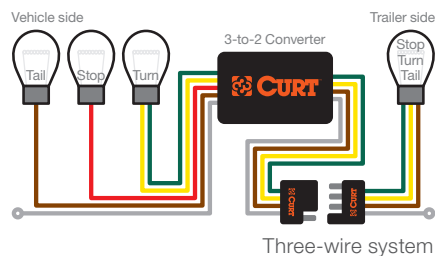

### Three-wire system

The three-wire system is the most common in the automotive industry. It sends the stop, taillight and turn signals along three separate wires. Vehicles with this system usually require a converter.

### PWM system

More and more vehicles today use a PWM (pulse width modulation) system. Sometimes called a 'multiplex', this type of wiring is able to control multiple lighting functions through a single wire by varying the signal intensity. PWM systems can use incandescent or LED lights. There are generally two types: ST systems and STT systems.

See page 10 for more details

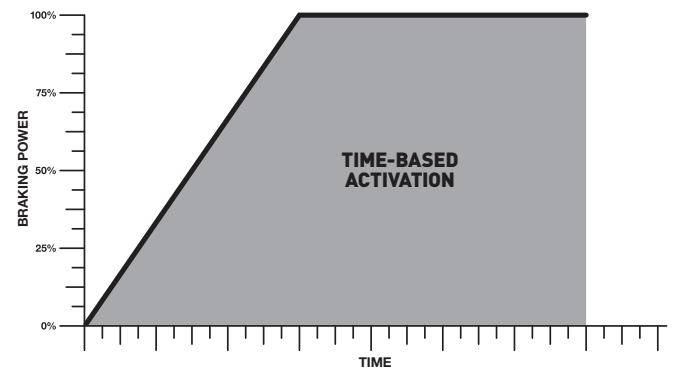

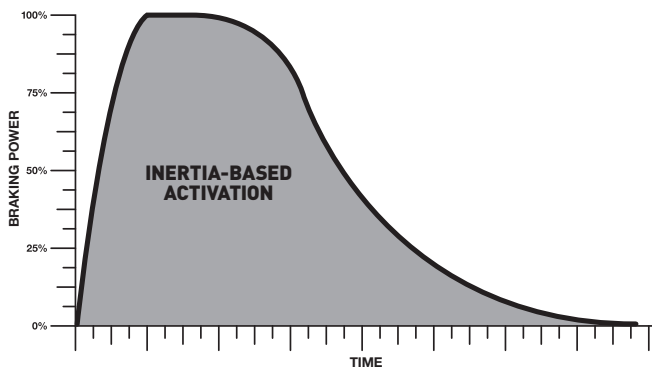

# THE INNOVATION LEADER IN BRAKE CONTROLLERS

## BRAKE CONTROLLERS HOW TO SELECT A BRAKE CONTROLLER

There are two basic types of brake controllers. Inertia-based brake controllers use accelerometers to measure the change in velocity or inertia of the tow vehicle when braking. Time-based brake controllers apply a steadily increasing amount of brake power, based on the gain setting and sensitivity adjustment specified by the driver.

Answer the following questions to help determine which brake controller is the best fit for your customer.

### What are they towing?

#### Heavy-duty

An inertia-based brake controller is ideal for towing heavy or fragile cargo. It will perform much smoother stops, resulting in less stress on the cargo and on the vehicle.

#### Light-duty

If your customer is planning to tow a relatively lightweight trailer, a time-based brake controller may be sufficient. CURT's time-based controllers are more budget-friendly and perform well with lighter loads.

### How often do they tow?

#### Frequently

If your customer is planning to tow more than twice a year, the precision of an inertia-based brake controller will help protect the life of the vehicle and trailer.

#### Occasionally

If your customer will only tow once or twice a year, they may prefer the simplicity and relatively lower cost of a time-based controller. Time-based controllers also require very little effort to set up.

On vehicles with two-wire electrical systems that require a powered converter, the converter's red wire is not used as a stoplight connection and needs to be grounded.

## TAILLIGHT CONVERTERS

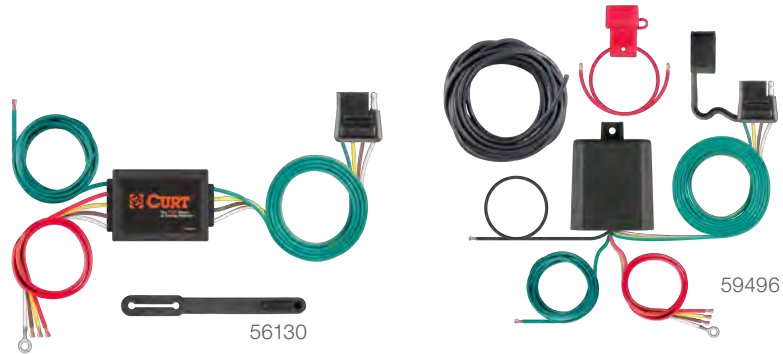

For vehicles that are not compatible with CURT custom wiring options, a taillight converter provides a reliable alternative. CURT taillight converters splice into the vehicle's wiring system and provide a standard 4-way flat trailer connector. **Use the Application Guide on page 30 to find the right wiring solution for your customer.**

# CUSTOM WIRING & T-CONNECTORS

For custom wiring application guide go to page 30

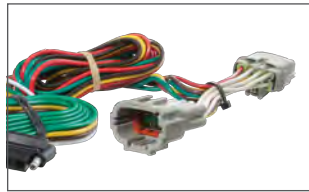

Custom wiring is the easiest way to equip a vehicle with a trailer wiring connection. There are two types: harnesses and connectors. Both are made vehicle-specific and install with no cutting or splicing.

- Provides a standard 4-way flat connector on the vehicle for plugging in trailer wiring
- Simple plug-and-play design eliminates the need for cutting or splicing
- Equipped with a taillight converter if needed
- Dust cover included to keep 4-way flat clean when not in use

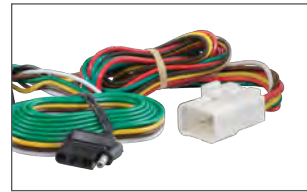

## Harnesses

Custom wiring harnesses use multiple plugs to 'T' into the taillight assembly

## Connectors

Custom wiring connectors use a single plug to plug into a specific OEM socket

# SELECTING A GOOSENECK HITCH

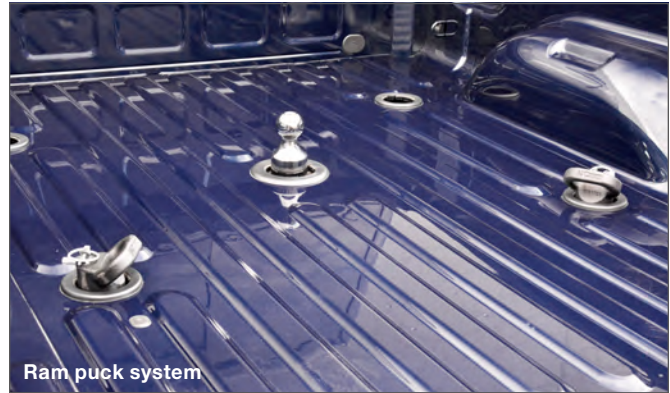

There are three basic methods for installing a gooseneck hitch:

## A | OEM PUCK SYSTEM OPTIONS

Many pickups today are factory-equipped with a truck bed puck system. A puck system provides attachment points for both gooseneck and 5th wheel towing.

For trucks with a puck system, an OEM puck system gooseneck kit is the easiest way to tow a gooseneck trailer. The components can be installed or removed quickly as necessary.

See page 186 to select one of these kits.

## B | HITCH & BRACKET OPTIONS

The traditional method for installing a gooseneck hitch is vehicle-specific brackets. CURT OEM-style gooseneck hitches feature a custom design that quickly and easily bolts to the truck frame without any additional brackets required. See page 188 for our OEM-style hitches.

We also offer a variety of traditional gooseneck hitches that mount with vehicle-specific brackets. Options include our Double Lock EZr™, original Double Lock, Quick Goose II and more. Start on page 190 for our traditional gooseneck hitch line.

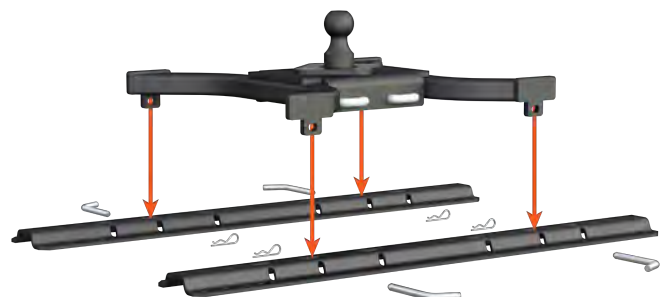

## C | EXISTING 5TH WHEEL BASE RAIL OPTIONS

For trucks with 5th wheel rails already installed, CURT offers 5th wheel rail gooseneck hitches. These 5th-wheel-to-gooseneck adapters easily drop into industry-standard 5th wheel base rails.

A 5th wheel rail gooseneck hitch provides a ball ready for towing a gooseneck trailer, and the hitch can easily be removed from the base rails whenever necessary to allow for 5th wheel towing.

See page 200 for 5th wheel rail goosenecks.

# MOUNTING A 5TH WHEEL HITCH

There are several components that make up a 5th wheel hitch, and these components are determined by truck type and customer preferences. Answer the following questions to help choose the right hitch for your customer.

## What size is the truck bed?

The length of the truck bed will determine which type of mounting platform the 5th wheel hitch requires: legs or a roller. **Note: A roller may be required for long-bed trucks. Review each configuration before purchase.**

### LONG-BED

5th wheel legs are the standard 5th wheel mounting method. A long-bed truck will provide the necessary room for this option.

For long-bed trucks, follow the orange path.

### SHORT-BED

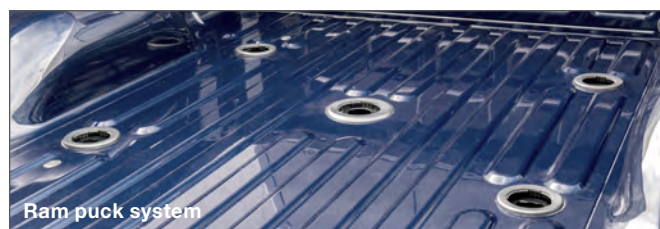

A 5th wheel roller is recommended on short-bed trucks. A roller adds clearance between the cab and the trailer when turning.

For short-bed trucks, follow the blue path.

## A | OEM PUCK SYSTEM OPTIONS

Many trucks today, specifically from Ford, GM, Nissan and Ram, come with a built-in mounting platform in the bed called a puck system. A puck system makes installing a CURT 5th wheel hitch very easy.

If the truck does not have a puck system, continue to page 212 for rail system options.

### LONG-BED WITH OEM PUCK SYSTEM

If the long bed has a puck system, select a 5th wheel hitch with OEM puck system legs.

See page 209 for our complete kits.

### SHORT-BED WITH OEM PUCK SYSTEM

If the short bed has a puck system, select an OEM puck system roller option to mount the 5th wheel hitch.

See page 211 for our complete kits.

## B | PERMANENT RAIL SYSTEMS

If your customer prefers fixed rails in the truck bed, select a vehicle-specific, under-bed bracket kit and corresponding base rails to mount the 5th wheel hitch.

### LONG-BED

1. See page 213 for available bracket applications.
2. See page 212 for corresponding base rails.
3. Select a 5th wheel hitch from the 'Long-Bed Options' starting on page 208.

### SHORT-BED

1. See page 212 for available bracket applications.
2. See page 212 for corresponding base rails.
3. Select a 5th wheel hitch from the 'Short-Bed Options' starting on page 210.

2. Above-bed base rails

## C | REMOVABLE RAIL SYSTEMS

If your customer prefers the option of easily removing the base rails for an unobstructed truck bed, select a gooseneck hitch kit and an X5 adapter plate to mount the 5th wheel hitch.

### LONG-BED

1. See page 183 for available gooseneck hitches.
2. See page 215 for a corresponding X5 adapter.

## 5TH WHEEL WEDGES

A rotating 5th wheel pin box creates an alternative pivot point for the 5th wheel connection, providing the 5th wheel trailer with a wider turn radius. However, because of this secondary pivot point, the primary pivot point must be fixed to keep the trailer from wandering. A 5th wheel wedge bolts onto the pin box, locks up the kingpin and keeps it from swiveling.

- Allows CURT A30, A25, A20, A16 or E16 to be used with rotating pin boxes, such as Sidewinder™ (Trademark of Horizon Global™)
- Bolts on behind the kingpin of the pin box to restrict movement between 5th wheel hitch and pin box
- Protected by a durable carbide powder coat finish
- Made in USA (may include imported hardware)

## TRUTRACK™ WEIGHT DISTRIBUTION SYSTEMS

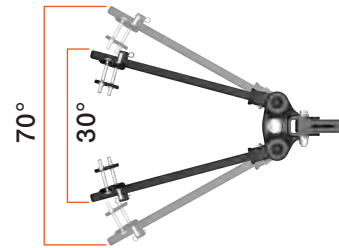

- Integrated sway control actively resists sway and levels the vehicle and trailer
- Welded head with cast pieces provides solid spring bar attachment
- Uses spring & cam system with hardened components, instead of metal friction
- Brackets use friction to resist lateral movement, replacing a sway control
- Fits virtually all A-frame trailers
- 2" shank can be used in the drop or rise position
- 2-1/2" replacement shanks available (page 232)
- Durable carbide powder coat finish and industrial chrome-plated cam components

17500

### Did you know?

TruTrack™ is designed to work in two neutral spring bar settings to fit almost all A-frame trailers. The spring bars can easily be repositioned in the 30-degree or 70-degree position (+/-5 degrees). Adjustment takes only 15 to 20 minutes, start to finish.

Quick, easy tilt adjustment, no disassembly required (excl 17501)

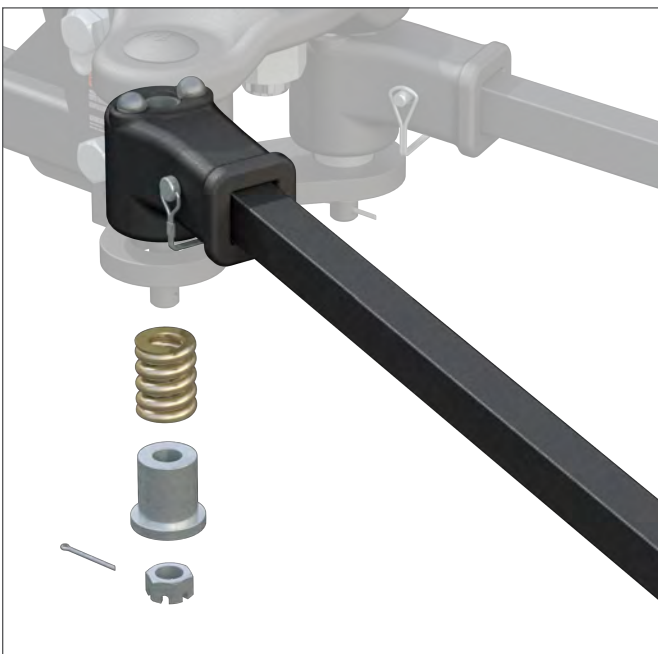

Adjustable brackets provide fixed support unlike chain models

## How active sway control works

### Spring-loaded bearings maintain pressure

Spring-loaded ball bearings within the TruTrack™ hitch head maintain pressure on the spring bars to actively keep the trailer aligned with the vehicle.

### Lateral forces activate resistance

As the trailer is exposed to lateral forces, the bearings compress into a rotational groove, actively resisting sway. The more sway the greater the resistance.

### Control increases with load size

Downward force on the spring bars increases sway resistance, meaning the larger the trailer, the more the ball bearings adapt to stop sway.

### Bearings relax for smooth turning

When turning, the bearings compress to their critical limit, freeing them to make a smooth turn. When the vehicle straightens, they pop back into alignment.

# SWAY CONTROL & REPLACEMENT PARTS

Sway control units reduce lateral movement, commonly caused by the wind, while pulling a trailer. The diagrams below illustrate the effectiveness of using sway control units. Two sway control units should be used for maximum control and stability.

## PROPER SAFETY CHAIN USAGE

Safety chains are required by law and should be crossed under the tongue of the trailer so that the tongue will not drop to the road if it becomes separated from the hitch. Always leave enough slack so the vehicle can safely turn. Never allow the safety chains to drag on the ground and never attach the chains to the bumper. For chain assemblies built to your exact specifications, contact your CURT sales representative.

## HOW TO ORDER CUSTOM SAFETY CHAIN

- Step 1** - Determine the gross weight of the trailer  
Example: 7,000 lbs. GTW
- Step 2** - Select chain required  
Example: #82120 zinc-plated (7,800 lbs.)  
Note: By law each individual chain must meet or exceed the GTW
- Step 3** - Determine the required length of chain  
Note: The chains must be long enough to cross one over the other under the coupling point (see illustration to the left)
- Step 4** - Select hook(s) according to capacity and design  
Example: #81900 clevis hook (7,800 lbs.)
- Step 5** - Contact your CURT sales rep for a quote

Federal law requires safety chains or cables to be secured while towing. Each individual chain or cable must meet or exceed the trailer weight.
