# PREFACE

## GET ROUND EVERY BEND – HELLA BULBS FOR MOTORCYCLES.

For over 100 years, HELLA has been developing high-quality lighting systems and components for the automotive industry and is one of the world's leading suppliers in this field.

We provide our customers with impressive quality, innovative technologies, and maximum reliability and service.

This is a standard we also apply to our extensive range of bulbs. Thanks to their mature technology, reliable function, and good durability, bulbs from HELLA ensure greater safety and convenience on the road.

Alongside light sources for cars, commercial, agricultural and construction vehicles, our range of bulbs also includes products tailored to the requirements of motorcycles and other two-wheeled vehicles, such as scooters and mopeds.

Not only do our bulbs cover a large number of models, workshops and aftermarket also benefit from rapid parts identification and good availability of parts – so that customers on two wheels can get back on the road quickly!

# TESTED QUALITY

Renowned vehicle manufacturers have been relying on our technological innovations and trusting HELLA's expertise, experience, and quality for years. We also apply the same quality standards to our bulbs. To keep you satisfied – and to ensure you have satisfied customers.

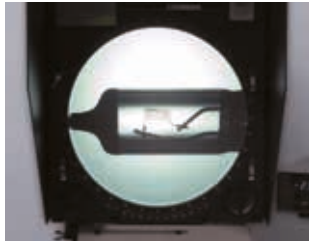

All HELLA bulbs are therefore thoroughly tested – and this of course applies to our motorcycle range too. The engineers in HELLA's Quality Assurance department have specified a clear requirement profile for every bulb type.

For example, the light distribution properties of motorcycle headlights are put through their paces using state-of-the-art light measuring equipment.

Paint adhesion tests in accordance with FAKRA guidelines (German Association of Automotive experts), vibration and shock tests in line with IEC requirements, geometry measurements, luminous flux and power measurements, as well as service life tests are also used. This is the only way in which we can guarantee providing wholesale and workshops with perfect quality.

**Consistent quality assurance isn't just a standard we set ourselves, it is also reality – so put your trust in HELLA when buying bulbs for motorcycles!**

#### **Geometrical measurement**

A measuring projector is used to check the filament geometry for compliance with the statutory standards stipulated in IEC 60810. The filament must be dimensioned and positioned within the bulb as specified in the standard. This is the only way to achieve optimum headlamp power and prevent glare to oncoming traffic.

#### **Vibration and shock test**

Here, vibration resistance of the bulbs and the filament in particular is tested on an electro-dynamic vibration table.

#### **Paint adhesion test**

The adhesion of paint on coloured glass bulbs – such as the PY21W – is tested in a climate chamber at different temperatures and air humidity levels. Optimum adhesion of glass bulb paint guarantees the prescribed amber indicator light over the whole lifetime.

#### **Lifetime test**

Sophisticated tests are used to demonstrate the high reliability of HELLA bulbs over long periods.

#### **Luminous flux measurement**

An Ulbricht sphere and goniometer are used to determine the luminous flux and luminous intensity of HELLA bulbs. This guarantees the optimum luminous efficiency of our bulbs.

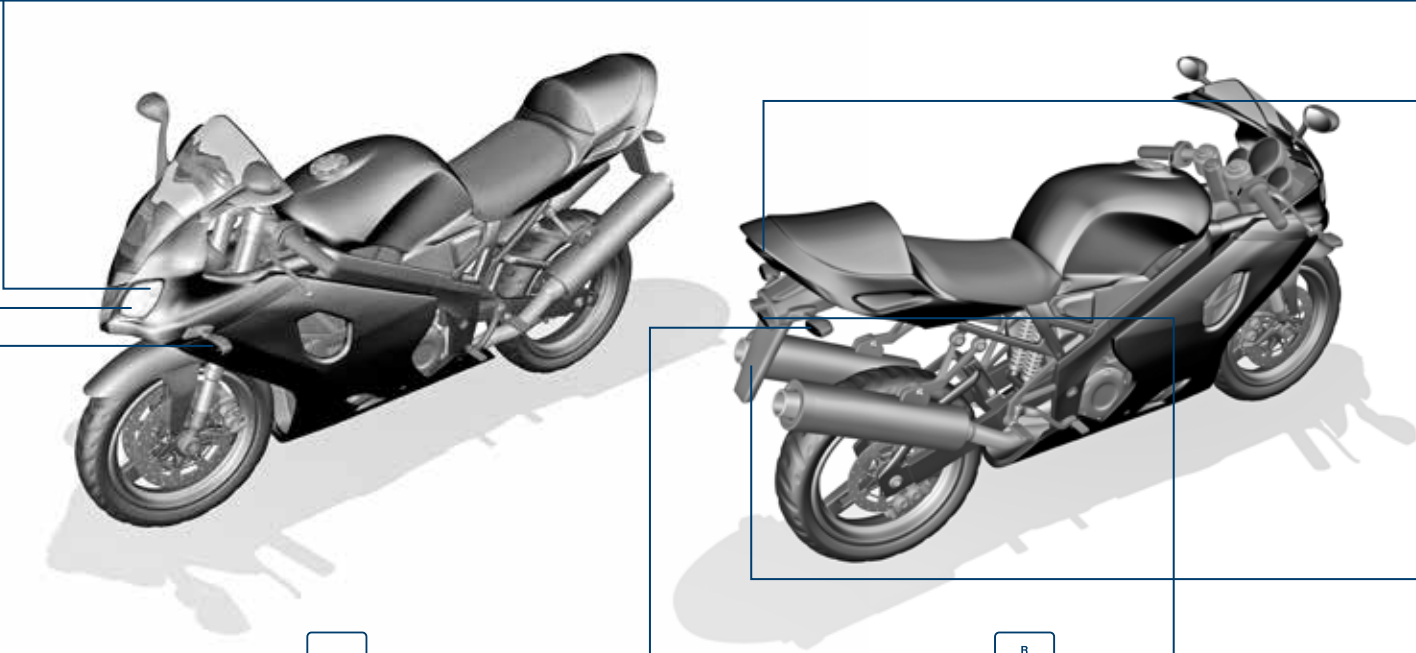

These tests and measurements form the basis of our tested quality.

# LIGHT SOURCE TYPES FOR MOTORCYCLES

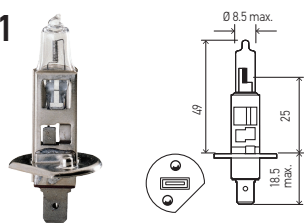

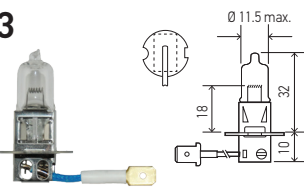

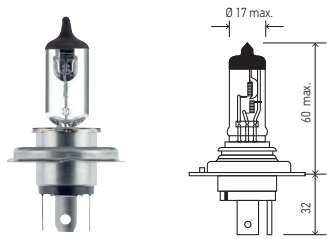

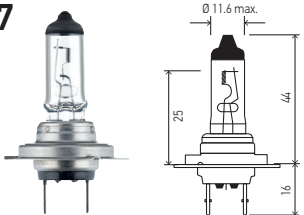

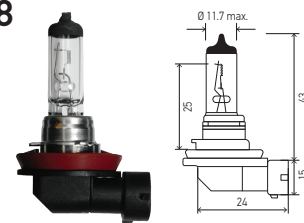

Good visibility is one of the most important criteria for safety on the roads – and that applies to all road users. Various environmental conditions, such as twilight and poor weather, can however restrict visibility and increase the risk of accidents. This makes optimum lighting even more important – especially for motorcycles as it's particularly important that they can see and be seen.

**This page contains a clear overview of common light sources for motorcycles sorted by function.**

# PRODUCT RANGE

Our wide selection of bulbs offers a huge variety. So the question of which bulb is suitable for which particular purpose often arises. Because we want to make the choice easier for you, we have put together a comparison of the most important features. So that motorcycles always have the right light for driving too!
