Coil on Plug (COP) Warranty and Diagnosis

Karlyn Industries/STI distributes high quality COP components. We utilize independent engineers to monitor our coils and test warranties. Most coils that are returned DO NOT have a problem. Rough running engines that set misfire codes can have multiple causes. It is the responsibility of the dealer/installer of our products to verify that the following items of inspection have been performed in order to comply with warranty replacement.

General misfire codes are most likely due to an intake vacuum leak or fuel delivery problem. Misfire codes identifying a particular cylinder are usually due to a fouled spark plug, dirty or dead fuel injector or loss of compression in the cylinder (burned or bent valve, weak or broken valve spring or leaky head gasket.)

If the crankshaft position sensor fails, the loss of the basic timing signal will prevent the system from generating a spark and the engine will not start or run. A failed driver circuit within the powertrain control module (PCM) can kill an individual coil and prevent that cylinder from firing. Replacing the coil without addressing the cause will only result in another damaged coil.

Misfire codes can also be triggered from a damaged wire harness due to poor grounds. Inspect the wire harness carefully. You may have to cut back the insulation to verify that there is no corrosion or melting of the wire harness due to poor grounds. A faulty harness can cause the coil to fail. If you simply install a new COP it may seem like you have corrected the problem, but merely replacing the coil without repairing the grounding problem may result in future coil failures.

In summary, it is important to remember that ignition misfire can also be caused by other factors such as worn or fouled spark plugs, loose or damaged coil connectors or terminals, dirty fuel injectors, low fuel pressure, intake vacuum leaks, loss of compression in a cylinder, or even a tank full of "bad" gas contaminated with water. These other possibilities should all be ruled out before a COP unit is replaced. (Note: A fouled spark plug can damage the COP. We recommend that you always replace the spark plugs when you replace the COP units and that all the ignition coils be replaced at the same time. As a form of preventive maintenance, we suggest this be done every 60,000 miles). We warranty our coils free from factory defect (12 months or 12,000 miles).

We will do our job to monitor and test the integrity of our coils. We hope that this information will help you to enhance the reliability and creditability of your repair while complementing our product. The main goal here is a real solution to your ignition problem, which will result in satisfied customers. Temporary solutions will only result in the return of non-defective parts and disappointed customers who will continue to have a recurring problem.

VW/AUDI COIL HARNESS/CONNECTOR REPAIR KIT

Failed or burned up VW/Audi ignition coils are most commonly caused by poor electrical connections, wire harness breaks or fouled spark plugs.

Up until now, there has not been a cost effective kit available to aid with VW/AUDI coil harness/connector repairs. Bremi/STI has developed a **Kit (#20113/40)** that contains the parts and tool needed to replace the self locking connector housing and to make simple harness lead repairs for all the popular VW/Audi Ignition Coils, including Karlyn/STI coil #'s 11961T, 11963T, 11971T, 20112, 20115, 20121, 20122, 20126, 20127, 20128 & 20130.

Each kit contains:

4 - High temperature leads and terminals,
all pre-assembled in an
OE type connector housing.

4 - Heat Shrink Butt Connectors

1 - Terminal Extractor Tool

#20113/40

You should replace all the connectors every time you replace a coil especially if you had more than one coil failure. A loose connection (caused by engine vibration, a cracked connector housing etc.) can cause a voltage spike which may not only destroy or burn up the coil it is attached to but also a neighboring coil because the harness wires are bridged together. The OE connectors to the coils are not designed to be repeatedly unplugged and re-plugged. The locking features of the connector housing are critical to maintain positive terminal contact. That is why OE recommends replacing the connectors if there is a chance of a loose connection. (see picture below)

Broken insulation on the wire harness (see picture below) can cause a voltage spike (misfire) that can destroy or burn up the coils. Harness related connectivity problems are very common and are usually the cause of coil problems when one has experienced more than one coil failure. Inspect the harness wires carefully for any cracks in the insulation and have them immediately repaired or replaced by an authorized VW repair shop.

You may utilize **Kit (#20113/40)** to make simple harness lead repairs.

PLEASE NOTE: NO PART OF THIS KIT SHOULD BE ATTEMPTED WITHOUT FIRST HAVING THE FOLLOWING;

A: BASIC KNOWLEDGE OF THE USE OF MECHANICAL HAND TOOLS

B: THE FACTORY REPAIR MANUAL AND UNDERSTANDING WHAT YOU READ.

C: A SAFETY UNDERSTANDING.

D: IF AT ANYTIME YOU FEEL YOU ARE OVER YOUR HEAD, YOU SHOULD REFER TO A VW/AUDI AUTHORIZED REPAIR FACILITY.

BMW DIRECT IGNITION UNITS (Parts List)

BMW Direct Ignition Coil Units are made up of a Coil and a Connector
which can be purchased separately.

BREMI DIRECT IGN. UNIT	COIL#	CONNECTOR# - LENGTH	CONNECTOR OE#
11856T	11855T	13249/1.8 - (115mm)	12-13-1-730-412

* Use 3 Direct Ignition Unit Connectors for cyl 2, 4, & 6 with #11859T coils (3 req per vehicle).

** For Chassis range from 000000 to 224.999. Use Long Type Direct Ignition (#11859T & #13331A1.8).

*** For Chassis range from 225.000 on. Use Short Type Direct Ignition.
