# Monroe® quality and durability makes Max-Lift® the only choice.

Monroe® Max-Lift® gas charged lift supports are now available as exact replacement fits for most vehicles sold in Europe since 1980.

Max-Lift® is the market's premium replacement product. The highest quality, design and durability standards have been applied to their manufacture. And isn't that what your customers have a right to expect?

## installation guide

- Always replace both lift supports to ensure top performance and to prevent twisting caused by uneven loading.
- Gas charged lift supports typically store a gas charge of over 330 Newton and cannot be compressed by hand.
- Gas charge lift supports can be installed in minutes with no special tools required.
- Careful inspection of all hinges and connecting points should be made for wear and tear or stress fractures. These should be replaced or repaired before lift supports installation.

### Installation Instructions:

- Before removing old lift supports, examine any fittings supplied to determine which components must be re-used.
- Have someone hold the hatch, bonnet, boot or rear window open while replacing the lift supports.
- The new lift support must be installed in the same position as the old one which was removed.
- Do not remove both lift supports at the same time. Replace one, then remove and replace the second one.
- Gas spring orientation ie. It is important that the gas spring be mounted with the tube up in the closed position as this ensures lubrication and smooth operation.

### Important notes:

When ordering a gas spring, please consider the following:

- Overall length from centre to centre (Extended)
- Pressure
- Type of end fittings
- Year, Make and Model of vehicle

### How to measure a Gas Spring:

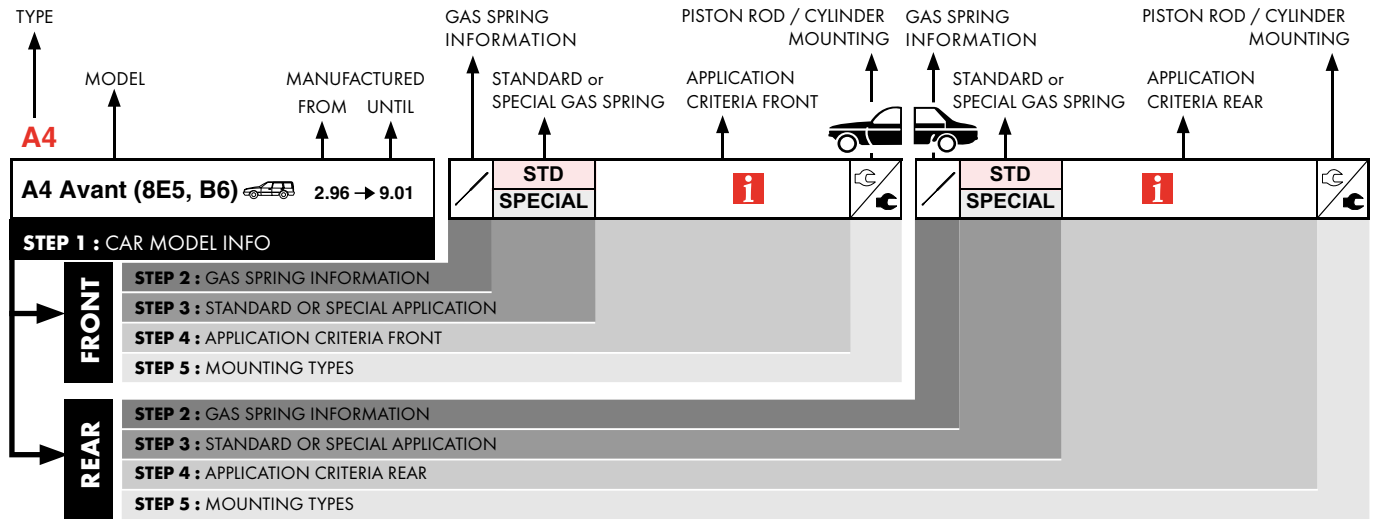

- Overall length is measured with strut fully extended and taken between the centre's of the fixing studs.
- Stroke is measured between top of strut barrel and end of shaft fitting.
