Power Acoustik INGENIX powered source units use a proprietary engine featuring 700 MHz CPU processor & WIN CE 5.0 operating system. Commonly found in compact netbooks, such lightning fast function processing has not been possible in an aftermarket automotive multimedia system, until now. INGENIX programming brings unique feature applications to your fingertips.

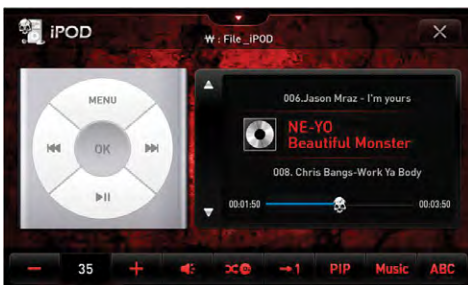

Go ahead, take a second look....

The primary menu of the INGENIX source units has an appeal that you might expect only from a computer. The LED back light Full HD quality 800x480 screen resolution yields a crisp image. Drag any mode application icon from the slide menu at the bottom of the screen and drop it onto the desktop as a shortcut. Utilize the drop down widget menu for quick settings access. The main menu background and brightness settings can be set to change automatically at night. There's even a scrolling marquee banner displaying your short message.

Picture-in-Picture

INGENIX is the first to bring the Picture-in-Picture function into the car. PIP allows uninterrupted video playback while simultaneously viewing the GPS navigation map in real time, as it happens. The picture can be re-sized and positioned to 3 different ratios.

Full iPod Control Integration (requires IP-5C cable)

Scroll through your iPhone, iPod Touch, Classic, or Nano to find your favorite tracks. Search options include by Album, Artist, Genre, Playlist, or entire track list. Jump through lists by first alpha character scrolling.

Set your destination and enjoy text-to-speech directions with lane guidance. Additional features include favorites list, programmable home destination, destination fuel estimates, multi-lingual, multi-gender voices, speed limit warnings, and more. Maps and POI data by TomTom.

AFTERMARKET OEM INTEGRATION

OEM in-vehicle technologies have advanced significantly in recent years. As more vehicles land on showroom floors with advanced network systems, the ability to integrate aftermarket source units has become essential. Power Acoustik is excited to partner with Fahrenheit and introduce its series of aftermarket OEM integration modules & universal steering wheel control interfaces. Communication, safety, and convenience features that otherwise would be lost are retained while enjoying added aftermarket entertainment. All modules are pre-fitted with Soundstream source unit and vehicle make/model specific wire harnesses, creating plug-n-play installation for all Ingenix, Inteq, Mobile 8, & other multimedia receivers.

mofo SUBWOOFER

MOFO X subwoofers are refined and increase efficiency dramatically! MOFO-X subs use a composite sandwich cone with a polypropylene surface for durability and Spruce pulp backing for smooth low bass. Like the original MOFOs, the new models still use an aluminum dustcap that couples to the voice coil former and extends over the cone. Why? The fins brace the cone and eliminate cone flex during high excursion. And since they are aluminum and couple to the voice coil, they act as a heatsink or heat extractor. Using the latest materials, the new MOFO subs yield superior performance. Cast aluminum baskets? Of course! Increased bottom octave output? You Bet! Louder than the original design? Duh!!

BAMF subwoofers are the newest answer to you bass fanatics. These beasts are engineered for the most extreme conditions. Massive 3" 4-layer voice coils built on an aluminum former can take the heat. Freakishly oversized motor structures provide more magnetic inertia than is ever necessary for a woofer. Spruce tree pulp cones, high density extended excursion foam surround, and hybrid suspension dampers work together to contain the momentum to a shattering roar...

Twisted & Woven Flax Fiber Cone

All Gothic woofers use torsion twisted Flax fibers woven together for ultimate strength and less elasticity. A heavy soaking in epoxy combined with the sonic qualities of pulp paper, Flax proves itself worthy of any system.

Extended Excursion NBR Surround

A strong and flexible heat resistant compound, nitrile butadiene rubber is used widely in automotive applications. Gothic woofers utilize an extended excursion NBR surround for its strength and flexible properties during extreme movement.

Back Plate & T-Yoke Venting

Heat build-up is a leading cause of catastrophic woofer failure. Venting built into the T-Yoke, back plate, and voice coil extract and dissipate heat, ensuring Gothic woofers keep their cool.

Overcast Stitched Cone Assembly

Surrounds of Gothic woofers are double overcast stitched directly to the Flax cone surface. In addition to superior adhesives, overcast stitching improves the conventional bond between cone and surround.

100% OFC 4-Layer Voice Coil

Gothic woofers use generous 1.50" long, 2.5" diameter 100% OFC Copper voice coils. A vented Aluminum former extract and dissipate any heat build-up, resulting in improved power handling.

THIN ENCLOSURES

Many vehicles do not have tons of space available for a big, bulky enclosure. Some vehicle, like some crew-cab trucks, have no space for a subwoofer. Until now... The THIN-13 is now the shallowest woofer on the market! Coming in at a mere 2" of depth, they will fit behind rear crew-cab truck seats, under many front seats, or even in a friggin' door with some custom fabrication! While other "shallow mount" subwoofers are available, they typically require traditional airspace. The THIN-13 is 13.25" in diameter and not only does it play in enclosures as small as .5 cubic foot well (typical for most 8"-10" woofers), but it reproduces lower frequency response than most 12" woofers in much larger enclosures. No more whining about not having a subwoofer available that will fit in virtually every vehicle! THIN-13 has you covered...
