## WORN ON ONE SHOULDER

### PROBLEM:

1. Excessive Camber (High or Low)
2. Excessive Toe In or Toe Out
3. Lack of proper rotation

### SOLUTION:

1. Total 4 Wheel Alignment
2. Replace or relocate worn tires
3. Rotate tires at regular intervals

## CENTER OR OUTSIDE WEAR

### PROBLEM:

1. Running tires underinflated (both shoulders)
2. Running tires over inflated (center wear)
3. Overloading vehicle
4. Possible combination of camber and toe problems
5. Lack of proper rotation
6. Improper tire & wheel fitment

### SOLUTION:

1. Check tire pressure weekly
2. Rotate tires at regular intervals
3. Total 4 Wheel Alignment
4. Check loading of vehicle

## FEATHER EDGE OR CUPPING

### PROBLEM:

1. Worn suspension parts
2. Wheel balance
3. Worn out shock absorbers
4. Internal tire problem
5. Combination of worn parts and alignment problems

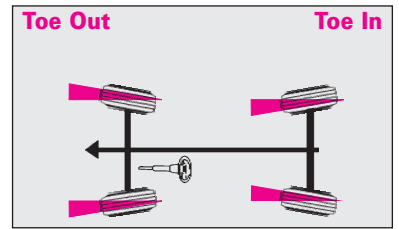

## BORDES ESCAMOSOS

### SOLUTION:

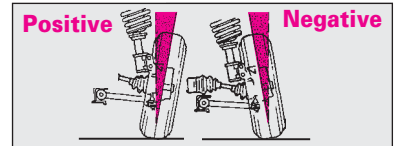

1. Inspect and replace worn parts
2. Check wheel balance
3. Replace tires
4. Total 4 Wheel Alignment

**Toe In** - Front of tires are shorter distance than rear tires across the axle  
**Toe Out** - Rear of tires are shorter distance than front tires across the axle  
**Effects** -  
**Most important angle for tire wear**  
 Excessive toe will wear tires quickly

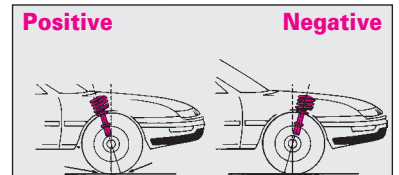

CAMBER

Tilt of tire inward or outward  
**Effects** - Can cause uneven tire wear  
**Cross Camber** - The difference in camber from side to side  
**Effects** - Can cause the vehicle to pull to the greater side

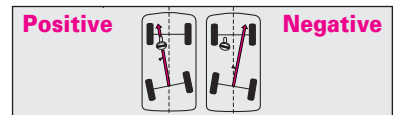

CASTER

Tilt of the steering axis to the front or back  
**Effects** - Helps with directional stability  
**Cross Caster** - The difference in caster from side to side  
**Effects** - Can cause the vehicle to pull to the lesser side

THRUST

Path or track of the rear axle compared to the centerline of the vehicle  
**Effects** -  
 May cause a pull or lead to one side  
 May cause a crooked steering wheel

**Prolong Tire Life**  
 Get the most from your tires  
**Improve Handling**  
 Increase stability in severe weather and on bad roads  
 Eliminate vehicle 'Pull'  
**Increase Gas Mileage**  
 Save fuel dollars and the earth  
**Reduce Suspension Parts Wear**  
 Minimize future repair costs

**Benefits**

*A Total 4 Wheel Alignment will pay for itself in these four important areas*

## EZ ARM™ ADJUSTABLE REAR ARMS

By removing the stock rear control arm and replacing it with the adjustable arm you can adjust alignment angles either positive or negative with the turnbuckle adjuster. These arms can be used on vehicles with stock ride height or vehicles that have been altered for performance.

## MULTI-LINK ARMS AND SETS

These rear arms provide an increased amount of alignment change on multi-link suspensions. You may need to make several links adjustable to maximize chassis set-up including camber, toe, set-back and tracking. Whether you need alignment changes to adjust for ride height changes, prepare for a weekend of road racing or correct suspension damage, these multi arm sets will provide maximum adjustability.

**EZ SHIM™  
FULL CONTACT /  
DUAL ANGLE SHIM**

TÜV approved, this patented Full Contact Dual Angle Shim will correct Toe and Camber with just one shim. There are 3 sizes available to cover many makes and models of front wheel drive cars with solid rear axles. The durable two-piece construction provides  $\pm 1.5^\circ$  of change, accurate to  $.03^\circ$  of toe and  $.10^\circ$  of camber.

**CAUTION:** Check for caliper to rotor clearance when installing this part on vehicles equipped with rear disc brakes. Some vehicles may require the use of longer bolts (#10408-below) or brake caliper spacers (#75970-below).

**EZ CAM™ XR -  
CAMBER KITS FOR  
DOMESTIC/ IMPORT  
TWO BOLT STRUTS**

EZ Cam™ XRs are designed for non-slotted struts. They allow both positive and negative camber changes up to approximately 1.75° (depending on vehicle) by replacing the upper O.E. strut/spindle bolt. This easy to use adjuster provides built-in adjustment over the life of a vehicle just by rotating the head of the bolt. Each kit contains two cam bolt assemblies, enough for both sides of the vehicle.

**THRUST  
ALIGNMENT PLATE**

Our patented thrust alignment plate will allow for corrections of setback and thrust angle on most vehicles with rear leaf springs. Installation is made by loosening the U-bolts holding the leaf spring to the axle, installing the alignment plate between the axle and leaf spring and re-tightening the U-bolts. Widths are available in 2-3/8" and 3", and each kit comes with multiple parts to provide coverage of most vehicles with rear leaf springs, including all early model passenger cars. **NOTE:** Allow extra time for rusted bolts. New, longer U-Bolts may be required.

This is THE kit to correct Thrust Angle!

## CAMBER, CASTER AND TOE ADJUSTING CAMS AND BOLTS

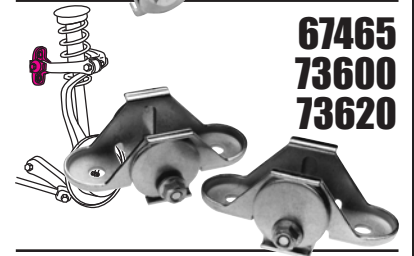

Cams in combination with bolts and cam guides provide easy change and positive lock for alignment angle changes in the front and rear of many passenger vehicles and trucks.

The eccentric design of SPC cams maximize the change available. In order to maximize change on some kits, elongating the O.E. slots by removing O.E. slugs with a punch (SPC No. 74910) or rotary file (SPC No. 85127) may be necessary.

TOOLS

## BUSHING PRESS SLEEVES

These sleeve sets are designed to make the removal of the OEM part fast and efficient, and to facilitate the installation of the new, adjustable SPC part. The 75990 Mercedes Rear Bushing Press Adapter Set also includes a wrench for easy adjustment of the 28840 rear bushing (page 44).

## UNIVERSAL SPRING COMPRESSOR

This two-piece internally threaded spring compressor is a great option for MacPherson strut, coilover, and other accessible springs. With 7" of travel and a 6,000 lbf max working load with a 3x safety factor, this is an ideal tool for almost any spring. Vinyl coated ends protect the spring from damage, safety jaws keep the compressor stabilized on the spring, and the ball bearing load surface makes compression easy using simple hand tools. Use of both hooks per spring is required.

## FRONT STRUT TOOL

This tool was designed for turning the valves on adjustable damping struts when installing our SPC Adjustable Strut Mounts (pg. 54).

## VW SHIM WRENCH

Designed to remove the rear hub when installing our 71520 and 71530 Series Volkswagen shim (page 44). This wrench is a must in assisting the installer when using these camber and toe shims.

## RADIAL RUN-OUT GAUGE

Radial run-out is an out of round condition in which the radius of the wheel or tire is not consistent from the wheel center to any point on the rim or the tread. Tire and wheel radial run-out are often factors in troubleshooting ride and handling and in maintaining correct wheel balancing to reduce vibration.

- Measures vehicle vibration sensitivity
- Measures out of round condition
- Easy to use - only 2 adjustments
- Pinpoints high or low spots in the tire
- Determines accurate centering of tire and wheel mounting
